

Friends Don't Let Friends... Near Lilies

#LiliesKillCats

- Lilies cause acute kidney failure in cats! This is *not* the same as chronic kidney disease in older cats... it's much worse!
- Dangerous lilies include: Easter, Stargazer, Tiger, and others in the *Lilium* genus, as well as daylilies in the *Heimerocallis* genus
- All parts are poisonous: the stems, leaves, petals, and even the pollen and the vase water!
- "Putting them up high" isn't safe enough: cats jump, petals fall, and pollen is carried on breezes

If you have cats, please keep lilies out of your home!
